## **DETAILED ACTION**

Page 2

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Furthermore, under PCT Rule 13.2 the requirement of unity of invention referred to in PCT Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 68-105 drawn to an isolated nucleic acid molecule comprising a regulatory sequence operably linked to a nucleic acid sequence that encodes an engineered RNA agent wherein the agent comprises a stem and loop portion.

Group II, claim(s) 106, drawn to a method of inducing RNAi of a target gene comprising enabling a cell to express an RNA agent.

Group III, claim(s) 107-168 and 170-173, drawn to a multitargeted partially doublestranded RNA molecule.

Application/Control Number: 10/009,134

Art Unit: 1635

Group IV, claim(s) 169 drawn to a method of making a composition comprising two or more different double stranded RNA molecules.

Page 3

The inventions listed as Group I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reason: the special technical feature of groups I is an RNA agent comprising a stem and loop portion. The RNA agent cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. U.S. Patent No: 5,814,500 teach an RNA agent wherein the agent comprises a stem 18 nucleotides in length and loop portion and further wherein the stem portion is complementary to a target mRNA (see Figure 1). The reference also teaches an isolated nucleic acid molecule comprising a regulatory sequence for expression of this RNA agent.

The inventions listed as Group I and II, III and IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reason: the special technical feature of groups I is an RNA agent comprising a stem and loop portion. The special technical feature of group II is a method of inducing RNAi of a target gene, which is not present in group I. The special technical feature of group III is a multitargeted double stranded RNA molecule, which is not present in groups I-II. The special technical of group IV is a method of making two different double stranded RNA molecules, which is not present in groups I-III.

Application/Control Number: 10/009,134

Art Unit: 1635

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: HBV, HIV, HSV, CMV, HPV, HTLV and EBV and species mitochondrial promoter, a RNA pol I promoter, a RNA pol II promoter, a RNA pol III promoter, a viral promoter, a bacterial promoter and a bacteriophage promoter.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 120, 122, 160 and 162 recite the viral target pathogen wherein the virus is selected from HBV, HIV, HSV, CMV, HPV, HTLV and EBV. Claims 148, 152 and 154 recite the promoters are selected from mitochondrial promoter, a RNA pol I promoter, a RNA pol II

Application/Control Number: 10/009,134

Art Unit: 1635

promoter, a RNA pol III promoter, a viral promoter, a bacterial promoter and a bacteriophage promoter.

The following claim(s) are generic: claims 119, 121, 159 and 161 are generic to viral pathogens and claims 150 and 151 are generic to promoters.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The viral pathogens as listed above all are targeted by different dsRNA molecules and each virus has a different sequence and different function. The promoters as listed above each have different functions and each express nucleotide sequences differently.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimberly Chong whose telephone number is 571-272-3111. The examiner can normally be reached Monday thru Friday between 7-4 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached at 571-272-0811. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is

Art Unit: 1635

(866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public. For more information about the PAIR system, see http://pair-direct.uspto.gov.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.
